Euromedlab 2015 in Paris is also entitled “Revolution in laboratory medicine”. Coming to France, and Paris, attendees are joining the heart of revolution and this word means a lot for France and French people.

French Revolution, also called Revolution of 1789, the revolutionary movement that shook France between 1787 and 1799 and reached its first climax there in 1789. Hence the conventional term “Revolution of 1789,” denoting the end of the ancien régime in France and serving also to distinguish that event from the later French revolutions of 1830 and 1848.

The French population participated actively in the new political culture created by the Revolution. Dozens of uncensored newspapers kept citizens abreast of events, and political clubs allowed them to voice their opinions. Public ceremonies such as the planting of “trees of liberty” in small villages and the Festival of Federation, held in Paris in 1790 on the first anniversary of the storming of the Bastille, were symbolic affirmations of the new order.

Revolution has also a lot of meaning for science with several examples like the Kepler’s Laws of Planetary Motion, the Newton’s Laws of Motion, the principle of Einstein and relativity.

But what can be the meaning of Revolution for laboratory Medicine. We ask therefore the members of the organizing committee to give their opinion on such stimulating topic.

To be continued on page 2
“Revolution in Laboratory Medicine is the perspective, one day, hopefully in a non-so distant future, to prevent any disease and offer care to patients before they even get ill. Laboratory professionals will gather at EML JIB Paris 2015 to make this ambition come true.”

Anne-Gaëlle Courty-Ahmed

“The EML2015 is in France where a revolutionary reform of laboratory medicine is currently in progress. The “French revolution” is an international symbol we can use as a line to construct our congress goals. The revolutionary goal is to give a real added value to laboratory analytical testing, founded on medical expertise, combined with proven total quality. To achieve this goal and really integer patient safety and medical expertise into laboratory practice, general trends needed are to:

- extend to whole process of the examination under the laboratory director responsibility
- include medical laboratory expertise at the pre and post examination levels
- prove using international standards the quality insured for the whole process

How Euromedlab 2015 can help to address this question?

- integration of this goal into scientific program : a synthesis on this subject could be made at every session end or each day? Also to be taken into account in newsletter, website and app.
- discussion with IVD partners to influence the companies communication plans in exhibition.”

Michel Vaubourdolle

“Wondering how our profession of “specialist in laboratory medicine” will be practiced in 2025 implies a certain modesty and exposure to the critical regard of future generations. The temptation is also great to indulge in science fiction. Technical progress always takes time. Having foresight, whether it is a question of science, technology, or economics is not making predictions. EML Paris 2015 has the potential, considering the great participation and interest from European and International participants, to be the leading Lab Medicine event in Europe covering the translational nature of latest lab medicine researches as well as its applications in industry, university, hospital and private practice with the participation of A Nobel Laureate and many world renowned speakers.” - Bernard Gouget

Ulrich Schwöre

“Laboratory (IVD) Medicine accounts for more than 2 thirds of medical decisions taken; with new technologies (eg Sequencing) and innovative tests coming to market, IVD will even gain importance in the continuum of healthcare. From prevention via diagnosis, prognosis to monitoring, the lab is key for maintaining and regaining health of patients. Our medical knowledge expands exponentially and it’s becoming more and more complex for Clinicians and Physicians to derive at the right medical conclusion; as healthcare cost is and will be increasingly under pressure, there is also an economic need to derive at the correct treatment decision as quickly as possible; this complex task can be completed in a save, efficient and valuable way by laboratory medicine. This revolution is happening right now and it’s necessary that laboratory medicine takes it position in healthcare (and is vocal about it). With EML 2015 we can show the strength and growing relevance of LM by reaching out to other stakeholders in Healthcare and explaining what LM can do for them: Clinicians, Payers, Politics, Pharma and others.”

### Congress Highlights

One year to go: the EUROMEDLAB Paris 2015 Congress gets to the heart of its promotional phase, with the Preliminary Programme to be distributed around the world:

**IFCC WorldLab Istanbul 2014**  
Istanbul, Turkey - 22-26 June

**AACC 2014**  
Chicago, USA - 27-31 July
EDITORIAL

The association of EML with the JIB is a unique event that will make of the 2015 edition of EuroMedlab a very special time for the entire laboratory medicine European community. French clinical biology is undergoing a tremendous mutation that has echoed all over Europe. At the same time, the economic crisis that has struck Europe since 2008 has put Health under pressure in many countries. Time has come for reform and implementing more medical cost-effectiveness. Laboratory medicine has a big part to play.

The SDB aims to put this evolving crucial time at debate during EML-JIB in Paris on June 2015, striving for more discussions between laboratory specialists to build a practice that puts their discipline and expertise at the heart of ongoing medical progress and improved care for patients.

We look forward welcoming you in Paris, meeting, sharing experience and envisioning the future of our profession.

Sincerely,

François Blanchecotte  
President of the French Biologists’ Syndicate (SDB)  
General Delegate of the Confederation of European Biologists (CEB)

CLINICAL LAB ORGANISATIONAL ISSUES IN THE PROGRAMME

Professional and Laboratory management session
Pre and post analytical phases are crucial, however, their effective management and control by lab specialists throughout Europe is uneven. Clinical laboratories which supervise these pre and post phases tend to be convinced that these activities based largely on logistics, IT and organizational skills increase medical performance and generally care brought to patient.

The relation to patient in pre and post analytics  
Collaboration with clinicians and all health professionals: the emergence of a coordinated care model

What is at stake for public hospital laboratories and private laboratories in Europe with the aim of advancing medical care?  
Overview of European lab organizations and perspectives:  
- Organization  
- Staff  
- Equipment  
- Efficacy  
- Cost effectiveness  
- And above all best care for patients

Private Laboratory Management session
The necessary new skills of lab specialists who have a medical oriented practice:  
- Advanced knowledge in lab subspecialties and why not specialized professionals  
- Coordinated practice with all care givers, physicians and allied professionals: the conditions for optimal reinforced primary care and continuous monitoring of chronic pathologies  
- How to valorize coordinated care in a multi-disciplinary model?

More information on http://www.sdbio.eu/
REGISTRATION FEES
All delegates must register for the congress. Registration fees are as follows:

- **Before 30 March 2015**
  - Full Registration
    - €550 + 20% vat = €660
  - Young Registration (≤35 years)
    - €275 + 20% vat = €330
  - Day Registration
    - €250 + 20% vat = €300

- **After 30 March 2015**
  - Full Registration
    - €700 + 20% vat = €840
  - Young Registration (≤35 years)
    - €375 + 20% vat = €450
  - Day Registration
    - €300 + 20% vat = €360

- **On-site registration**
  - Full Registration
    - €750 + 20% vat = €900
  - Young Registration (≤35 years)
    - €400 + 20% vat = €480
  - Day Registration
    - €350 + 20% vat = €420

Congress delegates are cordially invited to submit abstracts of their scientific work for presentation as a free communication at Euromedlab Paris 2015.

An unlimited number of abstracts may be submitted provided the presenting author applies for “full registration”.

Abstracts should be submitted via the on-line submission system only.
Do not send in an abstract more than once!

Hotel reservation

**Kuoni Destination Management Paris**, Official Partner of EUROMEDLAB 2015 offers a customized services for your hotel reservations and related services without any additional booking fees.

We deliver our expertise to organize:
- Your stay in a range of hotels of different categories and locations at negotiated rates
- Your private transfers.
- Your meetings during the event.
- Your Lunches & dinners.
- With a tailor made service

Kuoni contact:
Siegrid El-Aouni
+ 00 33 (0) 1 55 87 80 58
siegrid.el.aouni@fr.kuoni.com

Accommodation is already in high demand. Therefore, we strongly recommend you to start planning now!
Paris Heritage

Paris is a city that artfully combines its rich heritage with contemporary times. In addition to major sites like the Louvre and the Eiffel Tower, which each year attract millions of visitors, the capital has other treasures such as fountains, bridges, vineyards and brasseries that are also an important part of its identity. Heritage is also about modern architecture and its connection with today's culture, an example of which is the CentQuatre, a new arts centre housed in the buildings of the former municipal funeral services. And not to be missed are the numerous heritage events throughout the year, notably the “Journées européennes du patrimoine” (European Heritage Days), when the public can visit places that are usually closed to the public.

In addition to its museums, Paris is also renowned for a large number of outstanding national monuments which attract a huge number of visitors every day. The most famous are the Arc de Triomphe and the Conciergerie, a former prison – notably during the French Revolution. Other less well known ones to visit include the Chapelle Expiatoire, a little gem of late neo-classical architectural style, situated a few steps from the bustling district of the main department stores and Saint-Lazare train station.

Literary Paris

Paris's heritage is also in its cafes, where writers would go to discuss their writing or talk about politics. They were once the haunts of Prévert, Hemingway, Sartre and many others, and are still a meeting place for writers and artists today. Paris was also home to the writers Victor Hugo and Honoré de Balzac, whose houses are open to the public.

Traces the history of the city, the palaces of the capital have adapted to its development, forming a living legacy. The national domain of the Palais Royal was built in the seventeenth century at the request of Cardinal Richelieu and the beautiful garden, center of the French Revolution, is a promenade which opened its doors to the columns of striped blue and white of contemporary artist Daniel Buren. The Petit Palais, the former Palace of Fine Arts, has maintained its mission of presenting classical masterpieces. As for the Elysée Palace, the former mansion of the eighteenth century, it is since 1848 the residence of the French president. It is open to the public during Heritage Days. And many other palaces can be visited on the occasion of exhibitions that take place. The Palais de Chaillot houses several museums including the Museum of Man in restaurant until 2012, the Navy Museum and the City of Architecture and Heritage. The Palais de Tokyo, meanwhile, dedicated to contemporary art.
